

# Quantstamp Visual Timeline

2017–2018

## Our Development Philosophy

The blockchain world is a rapidly evolving industry. For this reason, we implement an agile development process. In contrast to the “waterfall” model, agile development focuses on being adaptive and constantly testing versions of our protocol with our users. This is an ideal model for creating a protocol that fits our users’ needs within the rapidly evolving blockchain community. This world is very dynamic, so in order to excel in this environment, we are dynamic as well!

Below you will find our timeline which includes our achievements, development goals, and planned interactions with the wider Ethereum community.

These materials describe concepts that are under continuing development and subject to unknown risks, dependencies and potential changes. While these descriptions and timelines reflect our estimates and predictions based on current plans, information and judgment, we reserve the right to update, modify, delete or cancel features, functionality or schedules and you are cautioned not to place undue reliance on these statements.
